

Wenz WM 120/220 Series

Thermoform Machines for the production of blisterpacks
with card back

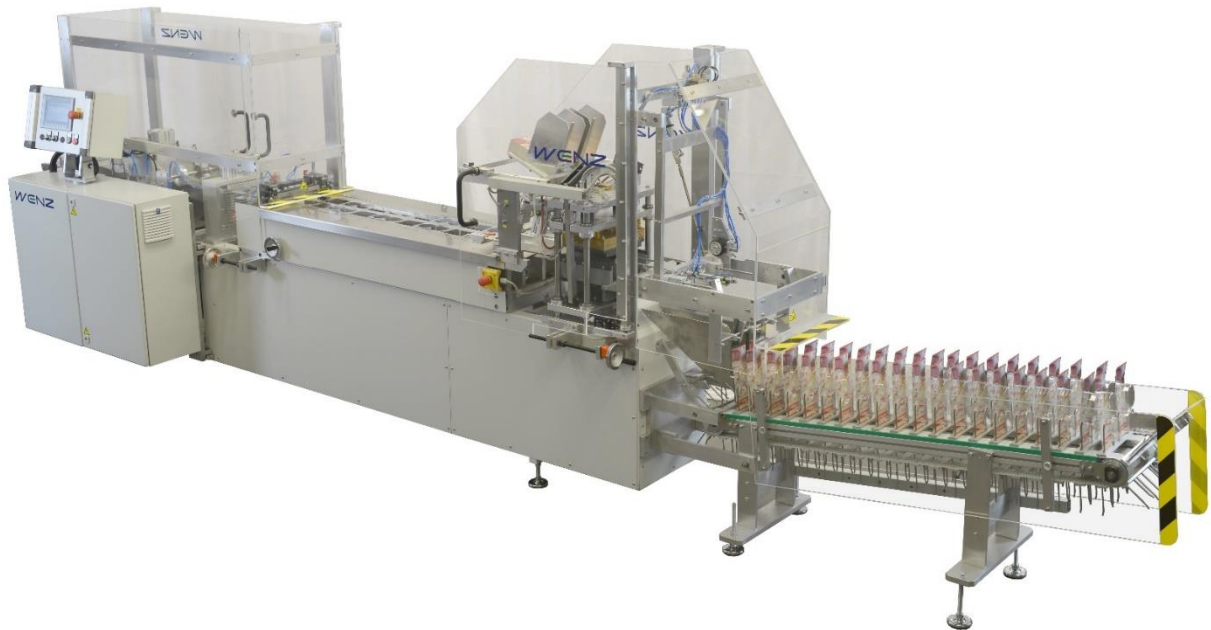

Photo shows customer machine with special features

With the WM 120/220 series, we offer a cost-effective and efficient version for the production of classic blister and thermoform packages in the self-service area with PVC or PET forming films and heat-sealable coated card back.

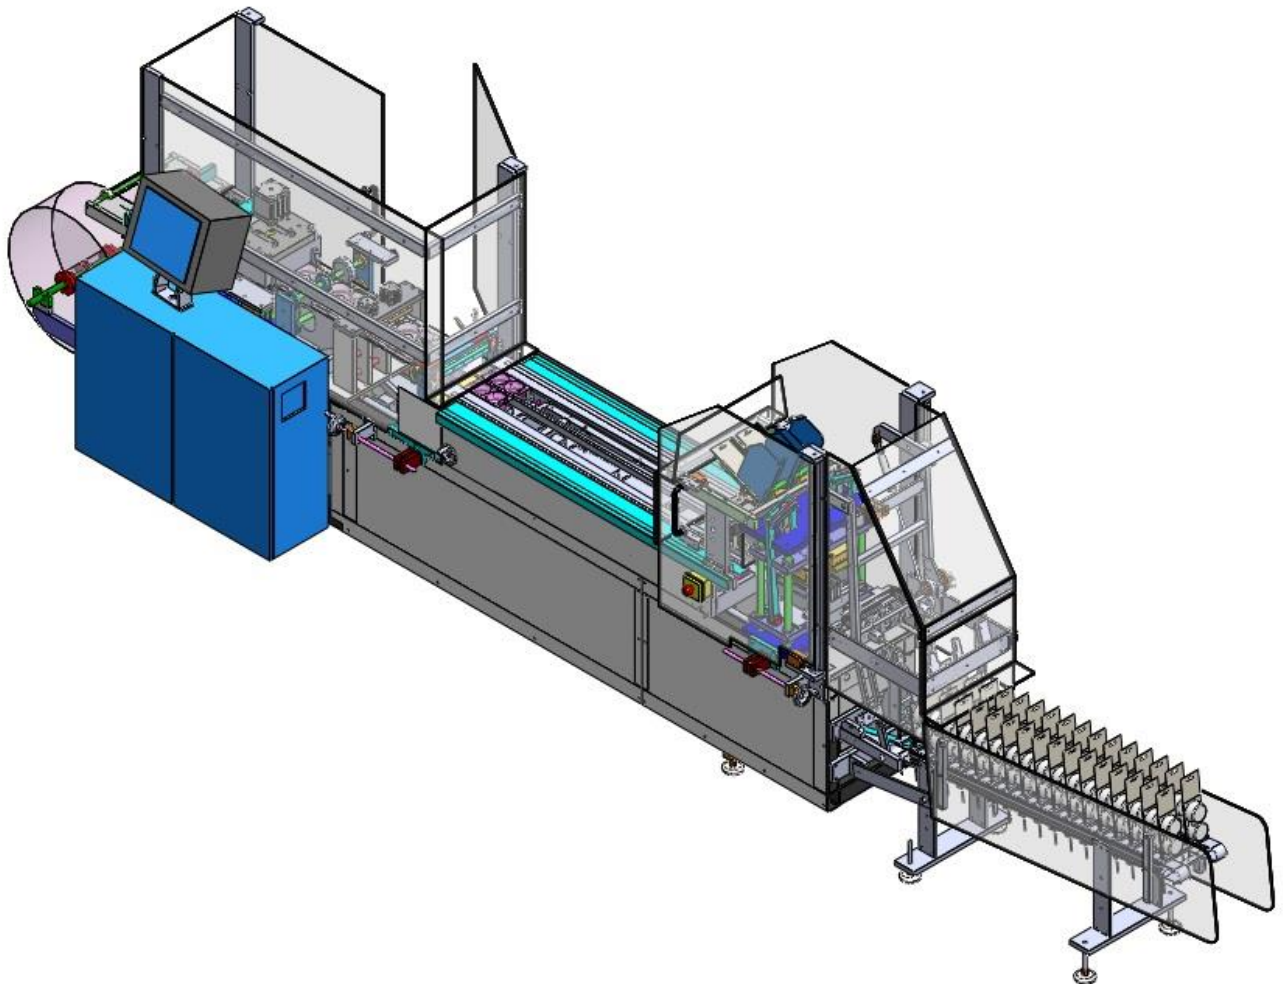

Technical Highlights

- Waste-free packaging
- Easy to use operation
- Fast, tool-free and reproducible format change
- Narrow design for optimal accessibility from both sides
- Format-free blister transport by means of walking beam, thereby drastically reducing format cost and set-up times
- Multiple tracks production possible for high output

Our strength is also the adaptation of the machines to special customer requirements. The following special designs have already been realized:

- Processing of preformed trays
- Foil blanks as backing instead of cardboard
- Automatic feeders, e.g. by means of pick & place system
- Machine combination WM 120/130 for blister production with card back or lidding film by simple activation of the workstations

Design of our solutions in 3D with Solid-Works

Technical Data WM 120/220:

Modell	No. of lanes	Max. blister size	Output/Speed
WM 120	1	220 x 110 x 50 mm	Max. 20 Blister/min.
WM 126	2	110 x 110 x 50 mm	Max. 40 Blister/min.
WM 220	1	280 x 160 x 50 mm	Max. 20 Blister/min.
WM 226	2	140 x 160 x 50 mm	Max. 40 Blister/min.

All mentioned speeds depending on blister shape and size and packaging material.

Technical data for machines with multiple lanes depending on customer requirements.

Product Range of WENZ Blister-Verpackungstechnik

- Thermoform Machines for production of blisters with card back
- Thermoform Machines for production of blisters with lidding film
- Cartoning and Wallet Machines
- Transport, Handling Systems and customized special applications
