

Transport and Handling Systems

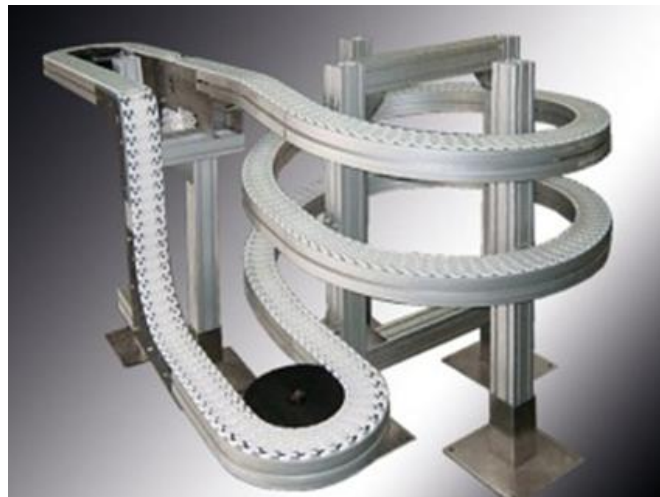

Company Wenz was founded in 1989 under the name "Wenz Maschinenbau" based in southern Germany. Since then, the company Wenz has successfully expanded its activities worldwide and is powerful in the development and production of blister and cartoning machines for special applications; Complete material transport and handling systems.

Complete Transport Solutions based on ProFlex conveyors

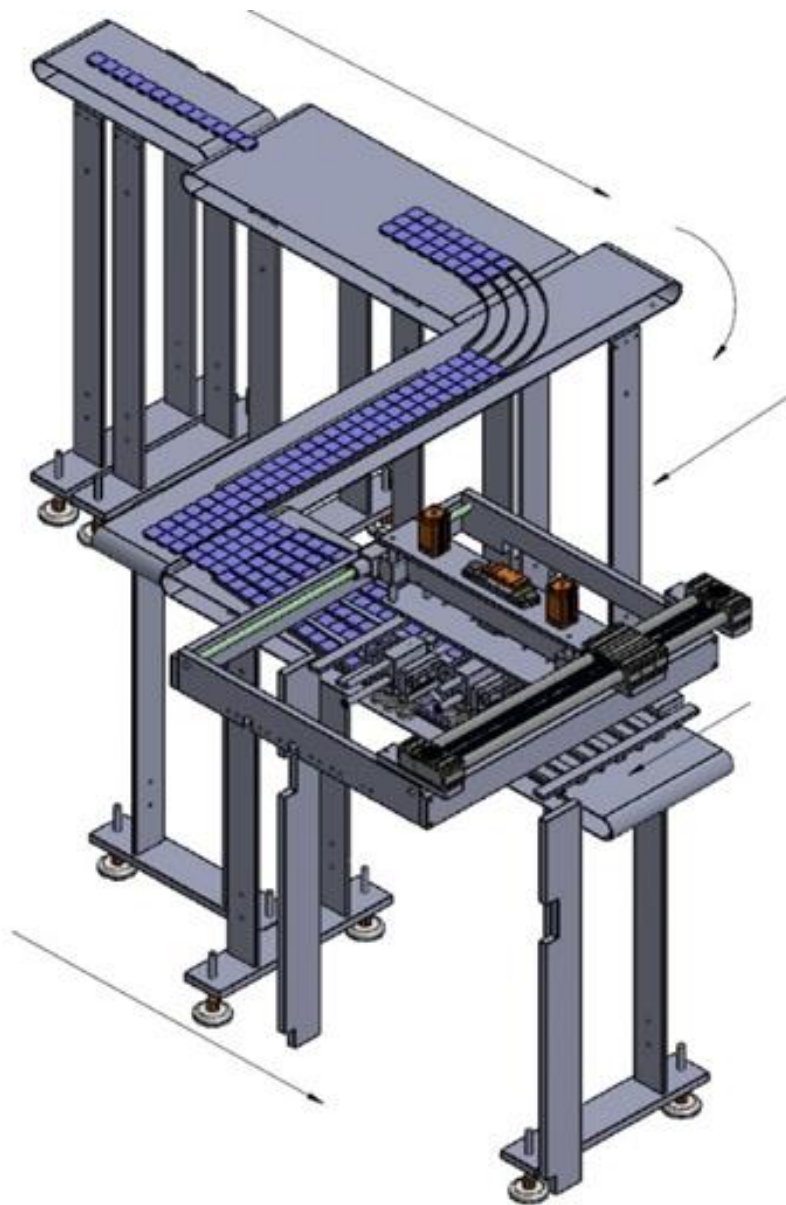

Based on 3D SolidWorks design system and complete assembly including testing of the transport solution at ProTek or Wenz, projects can be flexibly constructed and executed out depending on scope/application and available capacities.

Depending on the customer requirement, transport solutions can be delivered as a pure conveyor belt with or without gear motor for control via customer-side plc. Of course, also available as a fully functional system with own control, including handling or assembly elements.

Feeding units for special applications
